A55735
G protein-coupled receptor EBI1 - mouse
C;Species: Mus musculus (house mouse)
C;Date: 07-Jul-1995 #sequence_revision 07-Jul-1
C;Accession: A55735
R;Schweickart, V.L.; Raport, C.J.; Godiska, R.;
Genomics 23, 643-650, 1994
A;Title: Cloning of human and mouse EBI1, a lym
A;Reference number: A55735; MUID:95154835
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-378 <SCH>
A;Cross references: GB:L31580; NID:9468340; PII
C;Keywords: G protein-coupled receptor
RESULT 11
A39445
interleukin-8 receptor type A - h
N;Alternate names: interleukin-8
C:Species: Homo sapiens (man)
                                                                                                                                                                                δõ
                                                                                                                                                                                                                        В

Antibodies directed against the interleukin-8 receptor B can be used to treat or prevent inflammation e.g. psoriasis, dermatitis, to treat or prevent inflammation e.g. psoriasis, dermatitis, rheumatoid arthritis and particularly inflammatory bowel disease and check interleukin-8 receptor B expression in cells and tissues and for affinity purification of interleukin-8 receptor B from cells. This sequence is an additional chemokine superfamily receptor which was identified by probing lamda libraries of genomic DNA from a human monocyte-like cell line (L-60) and human peripheral blood lymphocytes using a large fragment of the interleukin-8 type as receptor DNA (See Q99006).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-MAR-1991; 677211.

                                                                                                                                                                                                                                                                                                                                                                                        The II-8 receptor CDNA sequence was isolated (see Q29505) and a 874bp sub-fragment of the coding sequence was used as a probe to screen human cell line HI60 and human peripheral blood lymphocyte cDNA libraries. Two new gene sequences were found that are clearly related to the II-8 receptor. One of these was contained in combined clone 8rr.20.15 and is predicted to encode an amino acid sequence which is 34% identical with both the high and low affinity II-8 receptors. See also Q37107.
